| Opis kolegija | <p>The course gives an overview of international cultural heritage policies, with emphasis on intangible cultural heritage, and their impact on the societies worldwide. National implementation of those policies in different countries is analyzed through relevant examples, in part depending on the research interests of the students. Historical changes of still living traditions are explained within the context of social, cultural, economic, religious and other changes. Approaches to traditional cultural heritage safeguarding discourse are critically approached through notions of heritagization, (mis)appropriation, commodification, commercialization and other. Future prospects of cultural heritage are observed in relation to natural environment and ecology, including crises and climate change, rights of communities and individuals, especially NGOs, economic changes, including tourism and rapid technical advancement, and other. The roles of international organizations such as UNESCO, ICOMOS, ICCROM, and so on are analyzed through various official documents, such as conventions, operative directives, national legislature and other, as well as through concrete examples from various countries in which they are implemented.</p> |
