## III. DETALJNI PODACI O KOLEGIJU

<b>Opis kolegija</b>	This course introduces students to the basics of brain functioning and mind-brain-behaviour interaction. The general aim is to help students understand the essentials of human behaviour. Students will have the opportunity to discuss and evaluate the importance of education from an early age, inquire how basic math and learning skills are acquired and compare similar behaviours in distinct species. They will explore the impact of social media on the brain, how brain, mind and body function during and after the psychological trauma and are the brains of people who commit crimes different from the brains of people who do not. The course places a strong emphasis on interdisciplinary dialogue. No background is assumed.
<b>Očekivani ishodi učenja na razini kolegija</b>	1. Understand the foundational information regarding the relationship between brain, mind and behavior. 2. Distinguish scientific facts from misconceptions about the mind and the brain. 3. Explain the nature of some basic psychological processes and their relation to brain function. 4. Present seminar paper(s) on selected topic.
