Detaljni izvedbeni plan

Akademski godina: 2025/2026	Semestar: Ljetni
Studiji: Sociologija - Upravljanje i javne politike (R) Sociologija (dvopredmetni) (R) (izborni)	Godina studija: 1

I. OSNOVNI PODACI O KOLEGIJU

Naziv kolegija: Population and Space: Demographic Patterns in Europe

Kratica kolegija: IZBD276

Status kolegija: Obvezni	ECTS bodovi: 6	Šifra kolegija: 279901
--------------------------	----------------	------------------------

Preduvjeti za upis kolegija: Nema

Ukupno opterećenje kolegija

Vrsta nastave	Ukupno sati
Predavanje	30
Vježba u praktikumu	15

Mjesto i vrijeme održavanja nastave: HKS – prema objavljenom rasporedu

II. NASTAVNO OSOBLJE

Nositelj kolegija

Ime i prezime: Mišetić Roko

Akademski stupanj/naziv:	Izbor: redoviti profesor
Kontakt e-mail: roko.misetic@unicath.hr	Telefon:

Konzultacije: Prema objavljenom rasporedu

Suradnici na kolegiju

Ime i prezime: Belić Tomislav

Akademski stupanj/naziv:	Izbor: viši asistent
Kontakt e-mail: tomislav.belic@unicath.hr	Telefon:

Konzultacije: Prema objavljenom rasporedu

III. DETALJNI PODACI O KOLEGIJU

Jezik na kojem se nastava održava: English

Opis kolegija

The course examines demographic processes from a spatial perspective, combining theoretical concepts and quantitative methods of population analysis. Special emphasis is placed on spatial demography methodology, including data collection, processing, and visualization, as well as spatial statistics and regression analyses. In addition to fundamental demographic skills, students will acquire practical experience in using GIS tools and spatial analysis software to study demographic patterns in Europe. The course is methodologically oriented and equips students with the skills needed to analyze demographic data in a spatial context, preparing them for research work and the application of acquired knowledge in academic and professional settings.

**Očekivani ishodi učenja
na razini kolegija**

1. Identify and describe fundamental demographic concepts and processes and explain their spatial aspect.
2. Select and collect relevant demographic data from various sources in the European context and prepare them for spatial analysis.
3. Calculate key demographic indicators and demonstrate proficiency in creating population projections using cohort component method.
4. Operate software tools (QGIS, Geoda), create spatial visualizations, and analyze spatial patterns of demographic phenomena.
5. Organize research on a selected demographic phenomenon, applying appropriate spatial analysis methods.
6. Present research findings in written and visual formats, including maps, graphical representations, and analytical reports.
7. Evaluate the results obtained from spatial analyses and critically interpret them in the context of demographic research.
8. Apply ethical standards in the research process and academic writing.

Način ispitivanja i ocjenjivanja

Polaze se DA	Isključivo kontinuirano praćenje nastave NE	Ulazi u prosjek DA
--------------	---	--------------------

**Preduvjeti za dobivanje
potpisa i polaganje
završnog ispita**

1. Class Attendance: Mandatory 70% attendance is required.

2. Research Paper (written)

A minimum of 35% of the grade should be acquired through regular course activities: research paper and one midterm exam.

Course activities:

Način polaganja ispita

Research Paper (written), Midterm Exam (practical);

Final Exam (oral)

Način ocjenjivanja

Grading Scale:

Failure (1) – 0 do 49.9%

Satisfactory (2) – 50 do 64.9%

Good (3) – 65 do 79.9%

Very Good (4) – 80 do 89.9%

Excellent (5) – 90 do 100%

Final Grade Calculation:

1) In-class Activities – 70%

1a Research Paper – 40%

1b Midterm Exam – 30%

2) Final Exam – 30%

IV. TJEDNI PLAN NASTAVE

Predavanja

#	Tema
1	Introduction to Demography, Spatial Demography, and Population Demography.
2	Sources of population data.
3	Population dynamics. Population composition.
4	Mortality.
5	Life tables.
6	Fertility.
7	Population projections and estimates.
8	Methodological approaches in spatial demography.
9	Data Visualization in QGIS.
10	Linking spatial and non-spatial data. Data harmonization and standardization.
11	Spatial analysis. Spatial statistics.
12	Geostatistical methods in population research.
13	Spatial Patterns of Fertility in Europe.
14	Spatial Regression Analysis.
15	Midterm exam.

Vježbe u praktikumu

#	Tema
1	Student task allocation.
2	Collection and processing of demographic data.
3	Population change. Construction of population pyramids.
4	Mortality indicators. Standardization.
5	Construction of life tables.
6	Measures of reproduction. Period and cohort fertility.
7	Calculating cohort component projections.
8	Introduction to QGIS. Basics of spatial data handling.
9	Thematic maps.
10	Data preparation for GIS. Other types of visualizations of demographic data. Isomorphic maps.
11	Introduction to Geoda. Exploratory Spatial Data Analysis.
12	Spatial autocorrelation indicators (Geoda and QGIS).
13	Spatial patterns of demographic indicators (Geoda and QGIS).
14	Spatial regression models (Geoda and QGIS). Interpreting spatial regression results.
15	Midterm exam.
